PROFESSIONAL SUMMARY

I'm a 3rd-year CSE-AIML student with a habit of turning ideas into shipped products. Framed problems, scoped MVPs, and coordinated cross-functional teams across three hackathons — including a 1st-place finish at TechRush GDG. Comfortable moving between product, design, and frontend depending on what the team needs.

EDUCATION

MGM College of Engineering and Technology Sep 2024 – May 2028
Bachelor of Engineering – Computer Science and Engineering (Artificial Intelligence and Machine learning)

SKILLS

- Product Skills:** Product Discovery, User Research, Market Research, Competitive Analysis, MVP Definition, Product Strategy, User Story Mapping, PRD Writing, Agile/Scrum
- Analytics:** SQL, Excel, Data Analysis, Market Research
- Collaboration & Communication:** Cross-functional project coordination, stakeholder communication, technical documentation, workshop facilitation
- Languages & Tech:** HTML, CSS, JavaScript, React.js, Python, SQL
- Frameworks & DB:** Flutter, Firebase, Firestore
- Design & Tools:** Figma, Canva, Git, GitHub, Notion, MS Excel, Firebase, Claude, Google's Antigravity

MAJOR PROJECTS

EcoLife — Gamified Carbon Footprint Tracker [\[Link\]](#) Jan 2026

- 1st Place - TechRush- GDG Internal Hackathon| Team of 4
- Identified a retention gap in existing env apps; repositioned around gamified, personalized experiences to drive behavioral change
 - Scoped a 5-feature MVP: onboarding, EcoScore engine, daily logging, campus leaderboard, and rewards system
 - Coordinated design and dev teams across end-to-end user flows and UI-backend integration
 - Shipped a demo-ready Android APK on a single Flutter codebase within a 7-day sprint

Sign-to-Speech Translator [\[Link\]](#) May 2026

- Affective Sign-to-Speech Translator | Python, TensorFlow, MediaPipe, DeepFace
- Addressed a gap in ASL tools — emotional intent is lost in translation — by building a real-time pipeline fusing LSTM gesture classification (7 signs, ≥85% accuracy) with facial emotion detection for adaptive speech delivery
 - Engineered a 4-stage local inference pipeline (landmark extraction → classification → emotion fusion → TTS) achieving <200ms latency at 15 FPS on CPU, with zero cloud dependency

CO-CURRICULAR

Co-Head, UI/UX — GDG on Campus, MGM CET Sep 2025 – May 2026

- Directed the UI/UX team end-to-end, overseeing club design projects from requirement gathering and planning through final delivery
- Coordinated project workflows across designers, developers, and club leads while maintaining design briefs, documentation, and progress reports
- Mentored members through wireframing sessions, design reviews, and frontend implementation guidance
- Facilitated a Figma 101 workshop for college peers, covering animation principles, design systems, and interactive prototyping

CERTIFICATIONS & PROGRAMS

Google Cloud Gen AI Study Jam Oct 2025

- Completed all assigned Google Cloud skill-badge tasks.
- Received official Google goodies and a completion certificate

HACKATHONS

Amity Nirman 2025 - Top 75/500+ Jan 2026

- Role: Research + Frontend
- Synthesized market research to frame the core problem statement and define the solution hypothesis
 - Prototyped the initial UI and built the frontend flow from wireframe to working screens

Smart India Hackathon (SIH) Sep 2025

- Role: Research + Architecture + Frontend
- Investigated blue carbon systems and MRV workflows to derive a functional product architecture
 - Implemented frontend UI and registry flow design aligned to the research findings

TechRush — 1st Place | EcoLife (see Projects) Jan 2026

IIT Roorkee E-Summit — National Finalist Feb 2026

- Received National Finalist certificate for the General Championship at IIT Roorkee's E-Summit.
- Competed against teams from across India in a multi-day entrepreneurship and innovation summit.
- Took part in several ongoing workshops in E-Summit.
